3rd Annual National Hybrid Conference 2023

Theme:

Inclusive Skills and Entrepreneurship Development in TVET for Sustainable Workforce in Knowledge-Based Economy

Designed by joecollins Ezeibe / joecollins@sezipe.com@gmail.com/08109466164

RATIONALE

Sustainable economy is the main propeller for national development and can only be attained when the workforce is endowed with essential skills and entrepreneurship mindset. Students graduate from higher institutions in Nigeria without requisite skills for self-employment, but move from one place to the other in search of paid jobs. Researchers argued that graduates of Nigerian higher institutions possess theoretical knowledge and principles, but lack the technical skills, critical thinking and problem-solving abilities to address industry problems. Others contended that graduates of higher institutions in Nigeria lack generic skills like decision making skills, analytical skills, personal skills, interpersonal skills, information and technology (IT) skills, numeracy skills, communication skills, among others for self-reliance.

Involvement of highly skilled and entrepreneurial minded graduates in economic activities will foster the delivery of complex and innovative tasks which will speed up the economic development of the nation. It is apparent that the national economic and social challenges can be drastically curtailed by the influx of skilled graduates, thereby encouraging national growth.

Educational methodology needed in our today's world is one which helps to educate an individual's mindset, behaviour, skills and capabilities and can be applied to create value in a range of contexts and environments from the public sector, universities and social enterprise to corporate organisations and new venture start-ups. Entrepreneurs are enriched with the competencies of creativity, innovation and risk taking as well as the ability to plan and manage resources in order to achieve target objectives. These entrepreneurship values needed in our graduates for industrial development is grossly lacking. The 2023 national conference of the Centre for Technical Vocational Education Training and Research (CETVETAR) is therefore anchored on addressing the skills and entrepreneurship inclusiveness for promoting resilient and sustainable workforce.

SUB-THEMES
